

LADIES AND GENTLEMEN

18th June, 2007

Welcome to our factory 3R. We are pleased to receive about 80 factory visitors. My name is president Yamaguchi. In Japan Yamaguchi is quite famous name as the biggest mafia group. But unfortunately I have no relation Japanese mafia Yamaguchi-gumi. Our homepage is www.3-R.CO.JP.

It is the first time to receive such many peoples since we have started this business since 1996. 11 years ago. That why we have arranged 2 speakers

just yesterday.

3R means REDUCE, REUSE, RECYCLE and also 3R is our company name.

We collect and dismantle 10,000units of ELV per year. Our employee is 50persons, Our turnover last year is approximately 7million US dollars.

Our business activities are export used parts, domestic sales of uses parts and scrape sales. We are taking more attention to sell uses parts than scrap sales.

Our land is 16,600 sq. meter and the 2 building are 5,600sq.meter

As you see one blue building looks new because we have just completed reform. But the factory building looks very old. we tried to renew before you visit but shortage of the budget, we could not. If we can succeed to make business with you, I am sure to renew the factory when you visit us next time.

This factory was built in 30years back and the first 19 years was used for making air conditioner by the another company and after the aircondition maker's bankrupt, we took over this factory. Therefore it is not so convenient to use for our operation. But we live in vein industry. Not artery industry, we must reuse the factory also.

Our characteristic is NO1. Regarding scrap, for whole use which means non-ASR Automobile shredder reside, Total scrap use which means we press the scrap after removing copper such as harness completely and bring it to electric blast furnace and burn it completely. All ASR dust such as plastic rubber, glass and textile are completely burn out and steel only remain.

NO.2. Quality control

We check compression ratio of all engines and if even one cylinder compression is under 10, we scrap such engine.

No.3. We keep our products under roof in order to avoid rain fall.

We separate 2 group and A group is guided myself and 2 charming staff and B group is guided by our director Mr.Yamada and 2 staff form the counterside.

I would like to ask your attention specially for ladies with high heel shoes

In factory heel, sometimes chink of floor plate catch your high heel because our factory also welcome you.

Anyway please be careful not be caught by the chink and not be shipped.

Best Regards,

3R Corporation
N, Yamaguchi
